

### The new COKIN® C-PRO Series screw-in filters

The new COKIN® C-PRO Series screw-in filters are the result of the renowned COKIN® experience in terms of optical quality. Made of high grade mineral glass, these filters have been developed to improve your images without altering their precision. They are presently available in diameters 95mm, 105mm and 127mm.

### COKIN® C-PRO Series UV Multi-coated

These filters have been developed to stop UV rays which disturb video sensors by giving images a blue tone. Their multi-coated treatment allows to filter all types of UV as well as reducing the atmospheric haze without changing the colour. The overall sharpness is increased with no exposition factor. It is recommended to leave permanently your COKIN® UV filter on your lens thus protecting it from scratches and other damages.

### COKIN® C-PRO Series Circular Polarizer

Polarizing filters will give your images a real noticeable new dimension by bringing a natural saturation to colours (the blue of the sky or the green of the grass...) and by reducing the intensity of light reflections on liquid or metallic surfaces. More, the 360° rotative ring allows a perfect control and a high precision setting, highly appreciated by professionals.
